

# **INSIDE THE ICT INTRADAY TEMPLATES**

WRITTEN BY: PAUL OSAWA A.K.A PEACEFX

## INTRODUCTION

Dear traders,

It is with profound love, dignity and integrity that I have come up with this compilation try to explain the insights and details. I am a Smart Money trader, so to say, ICT. I have found an edge with the concepts and decided to blend with whatever I learned in the field to come up with a trading style that aligns with my trading plan. It is my humble prayer that this pdf will better someone and will entirely change someone's trading journey.

It will not make sense if I don't give credits where it is due. I would wish to thank my fellow traders who I acquired knowledge from and those who made my entire trading journey to have many possibilities and a breakthrough in general. Th traders include: Michael J Huddleston, Chris Lori, Richard Wyckoff and Larry Williams who I will be mentioning as time goes by.

I have enough courage that indeed this book, will be beneficial to your trading journey and will partly change how you view the market place in a positive manner.

The Forex Market is also a risky Market. Before taking part in it, do your research to get the better drift of whatever you are engaging in. You CAN loose part or ALL of your invested capital. Part performance does not guarantee future performance.

This book is not meant to be sold. Report any selling issues to the author using the contact details provided in any sections of the book.

I wish you all the best in your trading journey. May it be full of knowledge, wisdom, understanding and blues. This is just the beginning.

Best Regards,

Paul Osawa, AKA PeaceFx.

# INSIDE THE ICT INTRADAY TEMPLATES

The ICT Intraday Market Makers template work everyday in every asset class and won't stop. It can help you get a better understanding of price on an intraday basis and the game plan of the market Makers. The market is a playing ground for the Market Makers and following the footprints can help you to make the right decisions in your trading.

The templates work both for buys and sells.

The templates alone don't work if you haven't framed your setups based on the higher time frames.

Without wasting much time, let me go directly to discuss the templates.

## 1. THE ICT CLASSIC BUY TEMPLATE

- It unfolds mostly on Monday, Tuesday and latest on Wednesday.
- It is the best template to make easy money.
- Happens during the London session. New York session will eventually give a retracement to continue with the trend that was set during the London session.
- The daily range will last for 7 to 8 hours once the profile is established.

- Mostly, it will give a drop of about 15 to 30 pips from the daily opening price during the London session. This is the best time to take your buy positions.
- When this profile is established, the Low of the Day will happen during London session.
- Ideally, it can also move a bit higher a little bit from the opening price but the idea is that it must drop.

EURUSD, 30 MIN TF

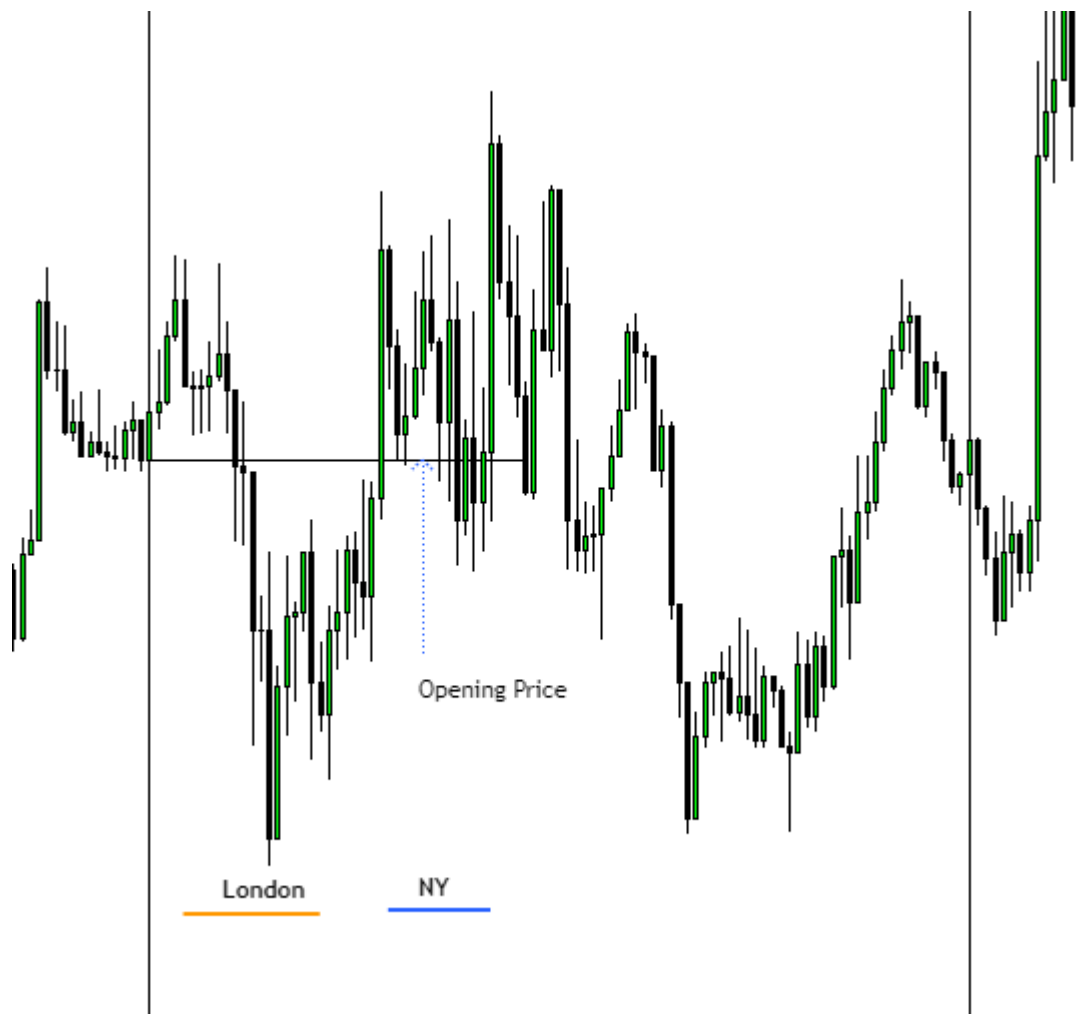

GBPUSD, 15 MIN TF

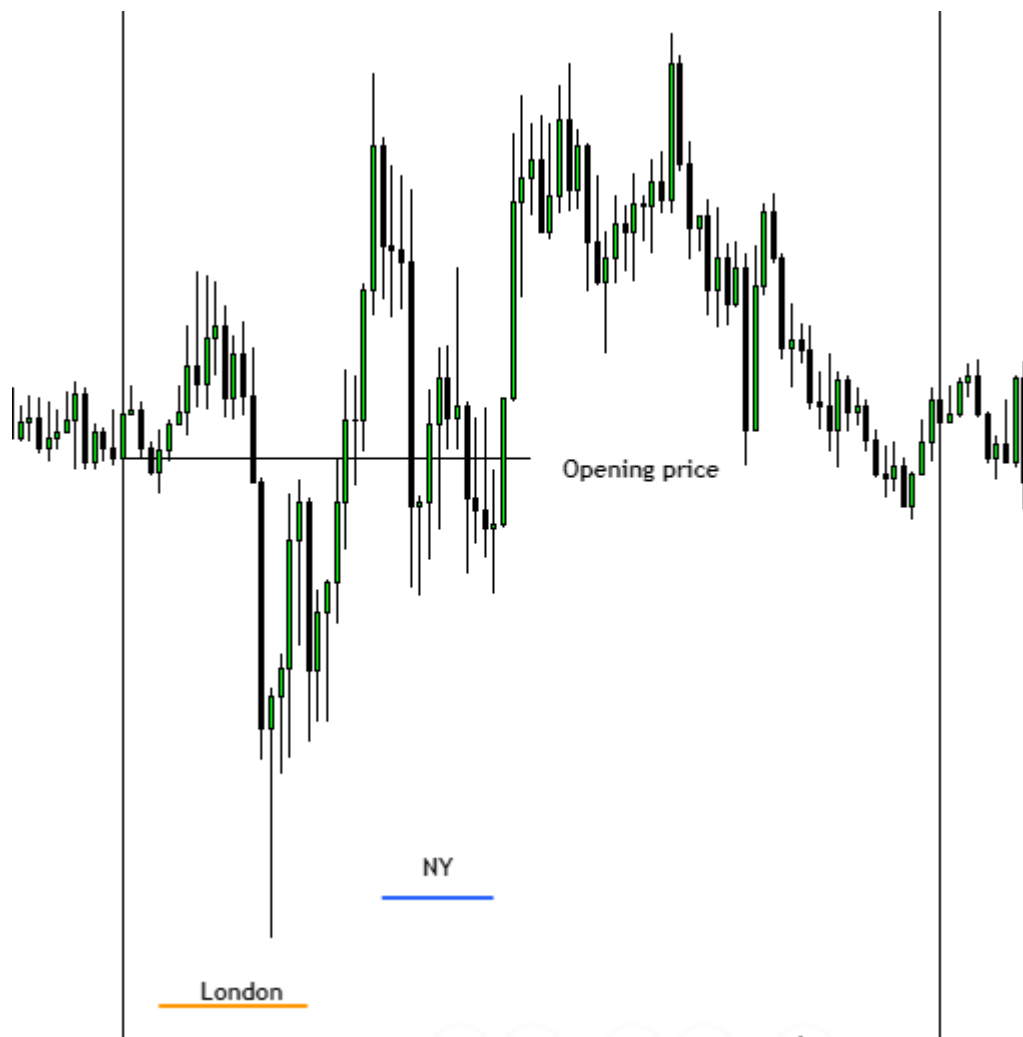

## 2. THE ICT LONDON SWING TO Z DAY

- Happens in the middle of a larger price swing when the trend is exhausted after a large explosive move.
- Ideally, it occurs on Thursday.
- Price will initially drop below the opening price then run above the opening price and goes back to the range back consolidation.
- Will first unfold as the ICT Classic Buy template.
- If it continues consolidating, DON'T look for continuation in New York.
- Always take profits in the beginning of New York if this profile unfolds.

GBPUSD, 15 MIN TF

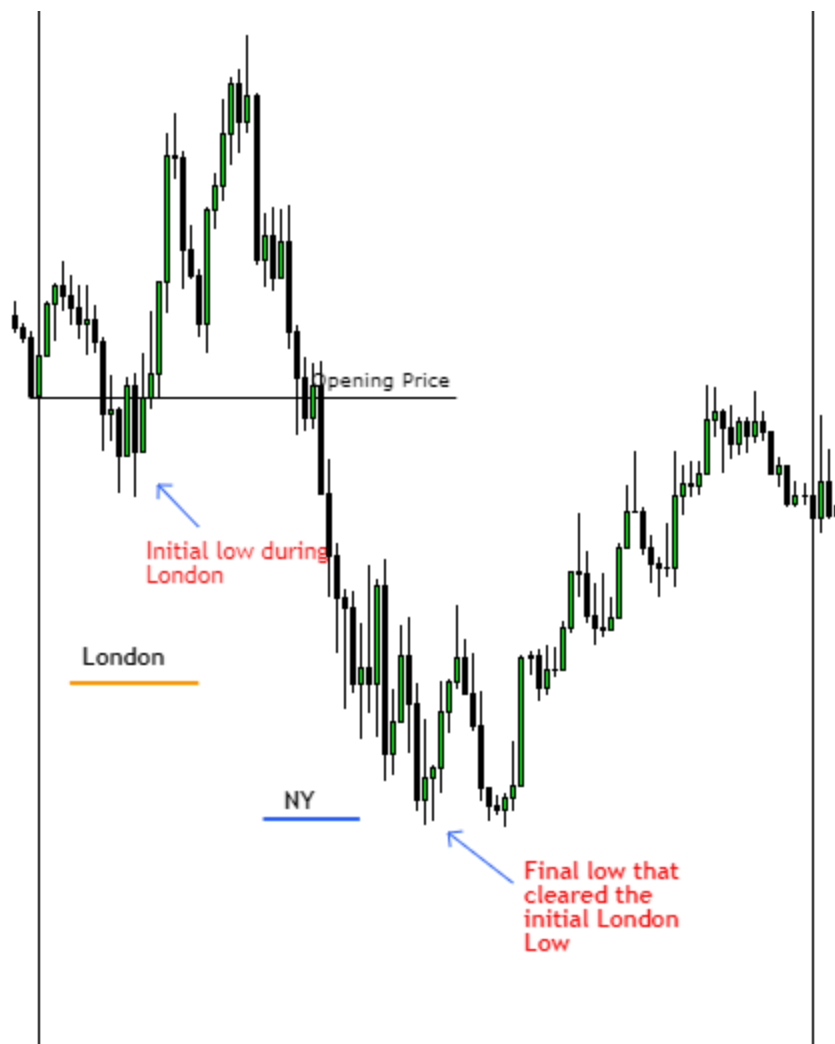

GBPCAD, 15 MIN TF

### 3. THE ICT LONDON SWING TO NYO/LC REVERSAL

- It always begins like a classic ICT Buy template with a decline of about 15 to 30 pips below the opening price then rallies.
- Once it drops, it forms a buy entry then rallies in to a higher time frame Point of Interest like a bearish OB, to close in to a FVG, OTE, etc.
- If it happens during New York session, it indicates classic market reversal profile.
- The template is used by the Market Makers to either reach for a Higher Time Frame bearish Order Block (OB), turtle soup or even to close a range.
- It will first create initial low of the day during London session, run up and create high of the day during New York or London Close, then run down, clearing the initial low that was created during the London session.
- Ideally can pan out after the market is in an exhaustion based on the HTF dominant trend.

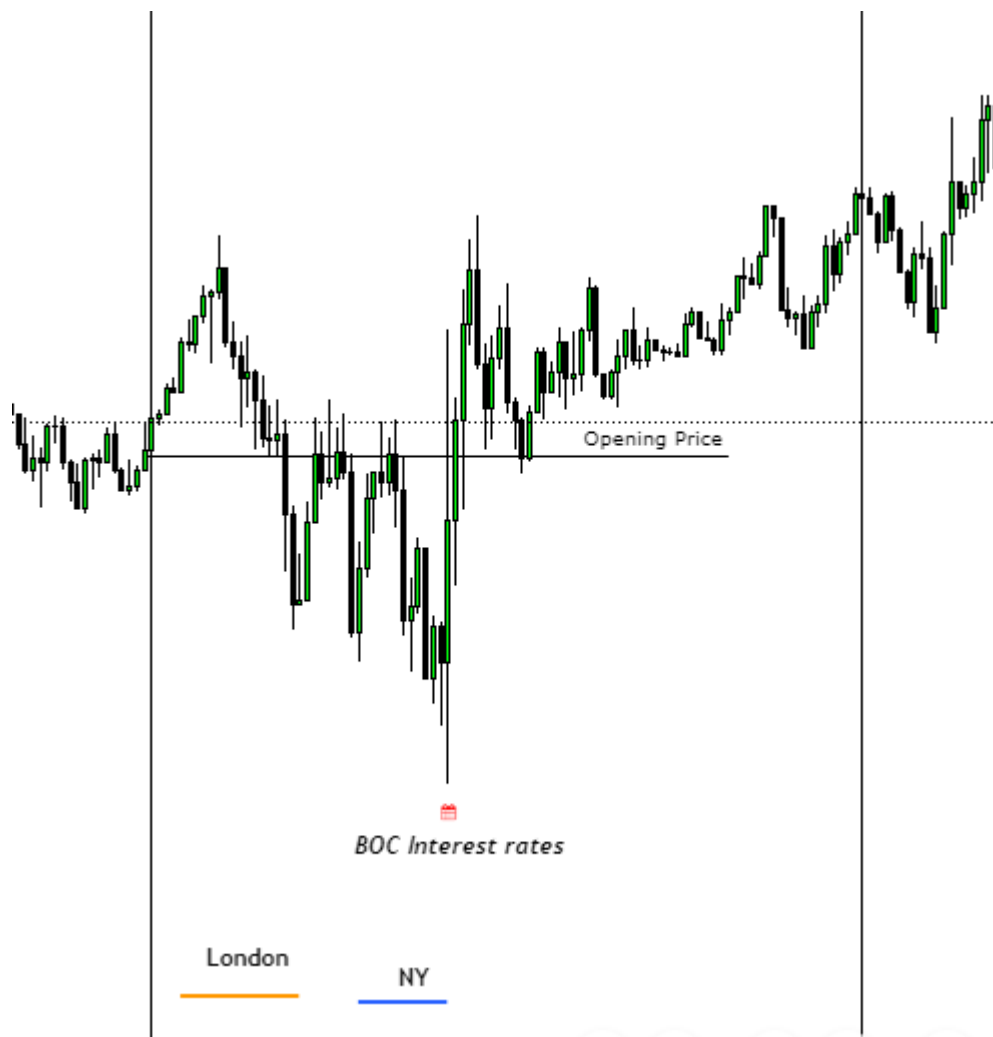

GBPUSD, 15 MIN TF

#### 4. THE ICT RANGE TO NYO/LC RALLY

- Generally, it happens during NFP or FOMC news events.
- The market will be originally in consolidation.
- Can occur during interest rates announcements as it relates to FOMC.
- If it occurs, the lows will be run out initially and will explode to the upside either during NFP or FOMC.
- Also, any high impact news during the New York session or London Close can pan out this way.

USDCAD, 15 MIN TF

USDCAD, 15 MIN TF

## 5. THE ICT CONSOLIDATION RAID ON NEWS RELEASE

- Happens during the major news events in New York.
- Best unfolds during FOMC.
- During news, the low of the consolidation will be taken out. Good to buy when the low of the consolidation has been taken out.

NZDUSD, 15 MIN TF

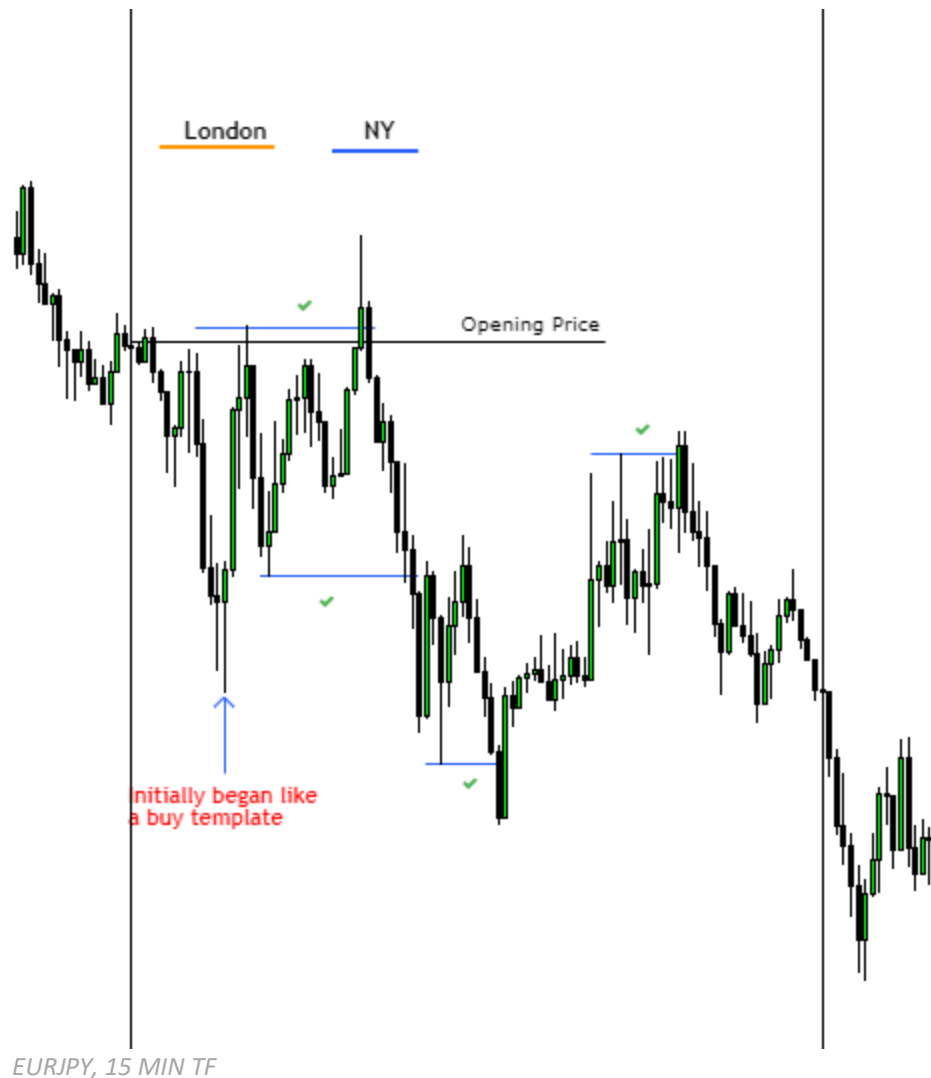

AUDUSD, 15 MIN TF

## 6. THE ICT LONDON SWING TO SEEK AND DESTROY

- It is the type of profiles that won't make you money.
- Initially, it will give you London Open buy, but won't come in to fruition.
- Can occur at the end of a larger price move.
- Can occur in the middle of a large price swing.
- Its main intention is to take out both buyers and sellers.

**FINAL COMMENTS:** Ladies and gentlemen, the attached templates are for the ICT intraday Market Makers template and I have included examples too.

The templates I have provided, are majored on the buys. This does not mean that the profiles are not working on the sell side. Just reverse or flip everything and get the opposite. It will mark the sell side. I just did the buys to save on time so that the content reaches you within the shortest time possible.

The templates unfold themselves on a daily basis. It is your responsibility as a trader to get the right frameworks and know what is happening. Learn and back test to get a better flow.

The best thing is that the templates work on any asset class. ✨ ✨
