WHAT IS THE CRT?

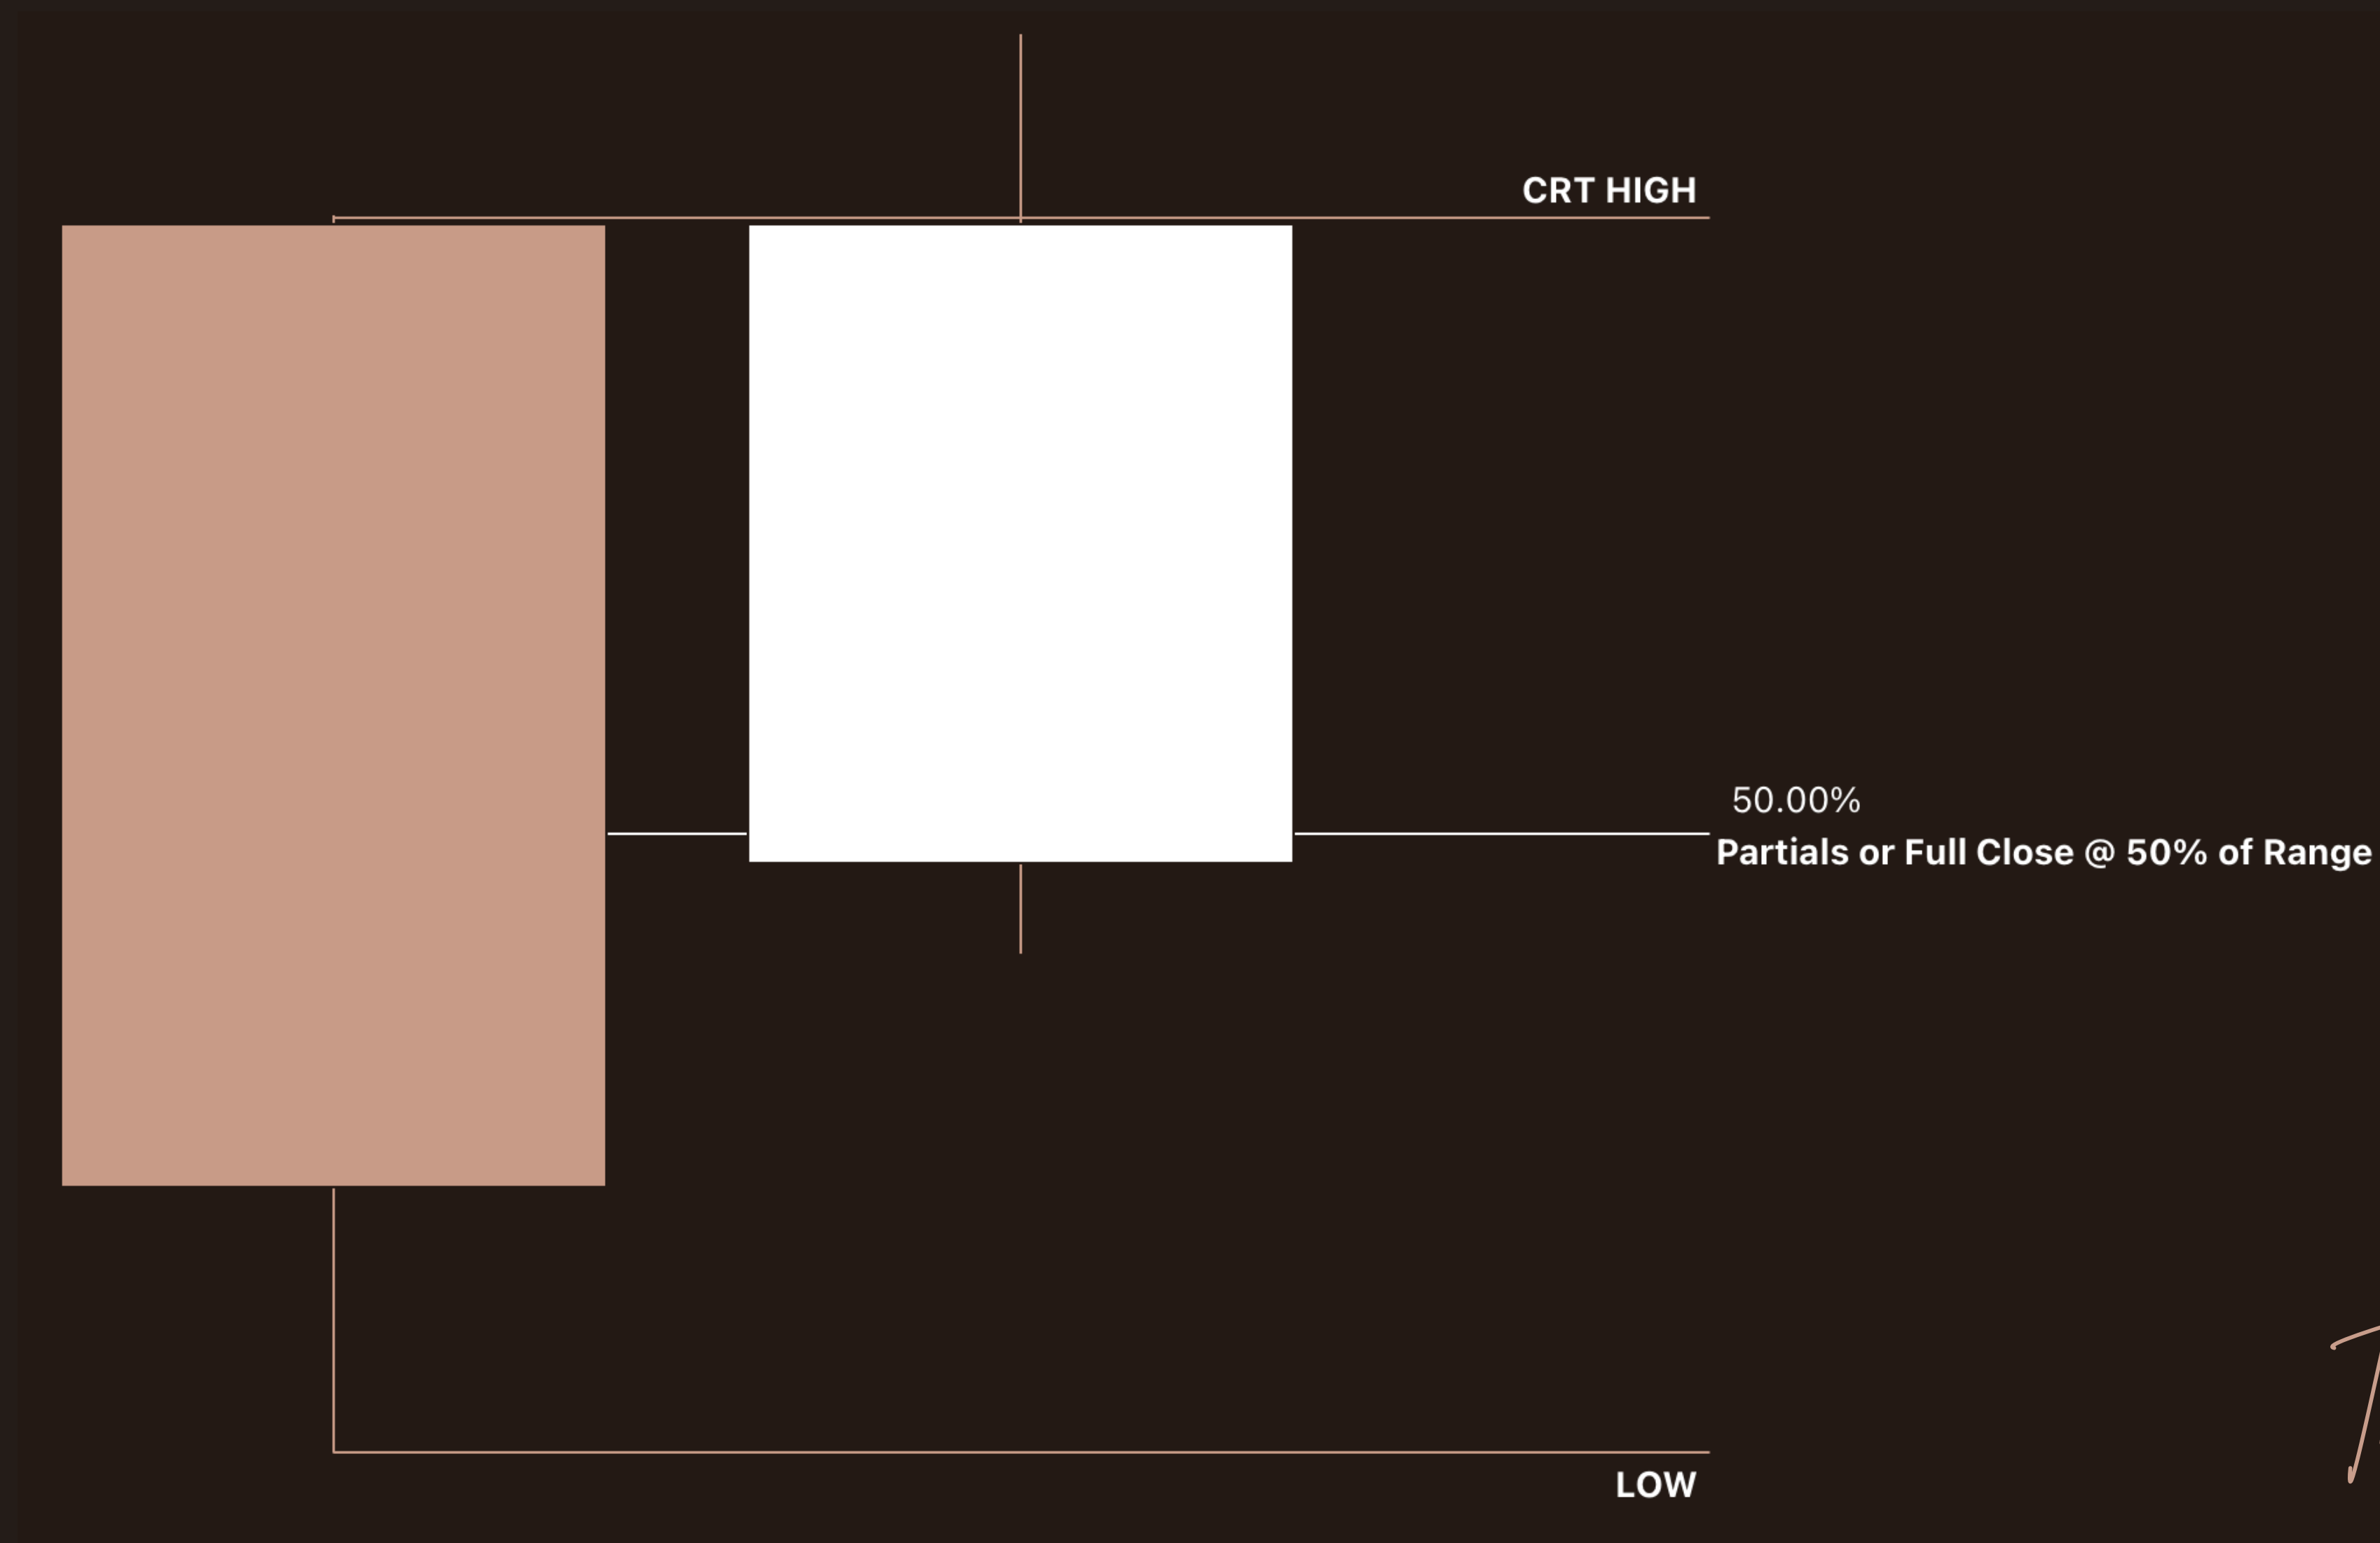

CRT stands for Candle range theory.

- The core concept of the CRT is that candles are ranges and possess a high/low with opening and closing times for each candle.
- The market's function is to seek Highs (buy stops) or Lows (sell stops) and Fair Value
- Once you identify a specific range this helps determine a bias, form a trade idea and determine the draw on liquidity (Targeted Buy/Sell stops)
- Once a sweep of range high or low occurs and We can look for entry sequence on LTF for entries to confirm the CRT
- 50% of the range as first target
- 100% of the range as second target
- HTF CRT + LTF CONFIRMATION + Time

EXAMPLE: MODEL #2

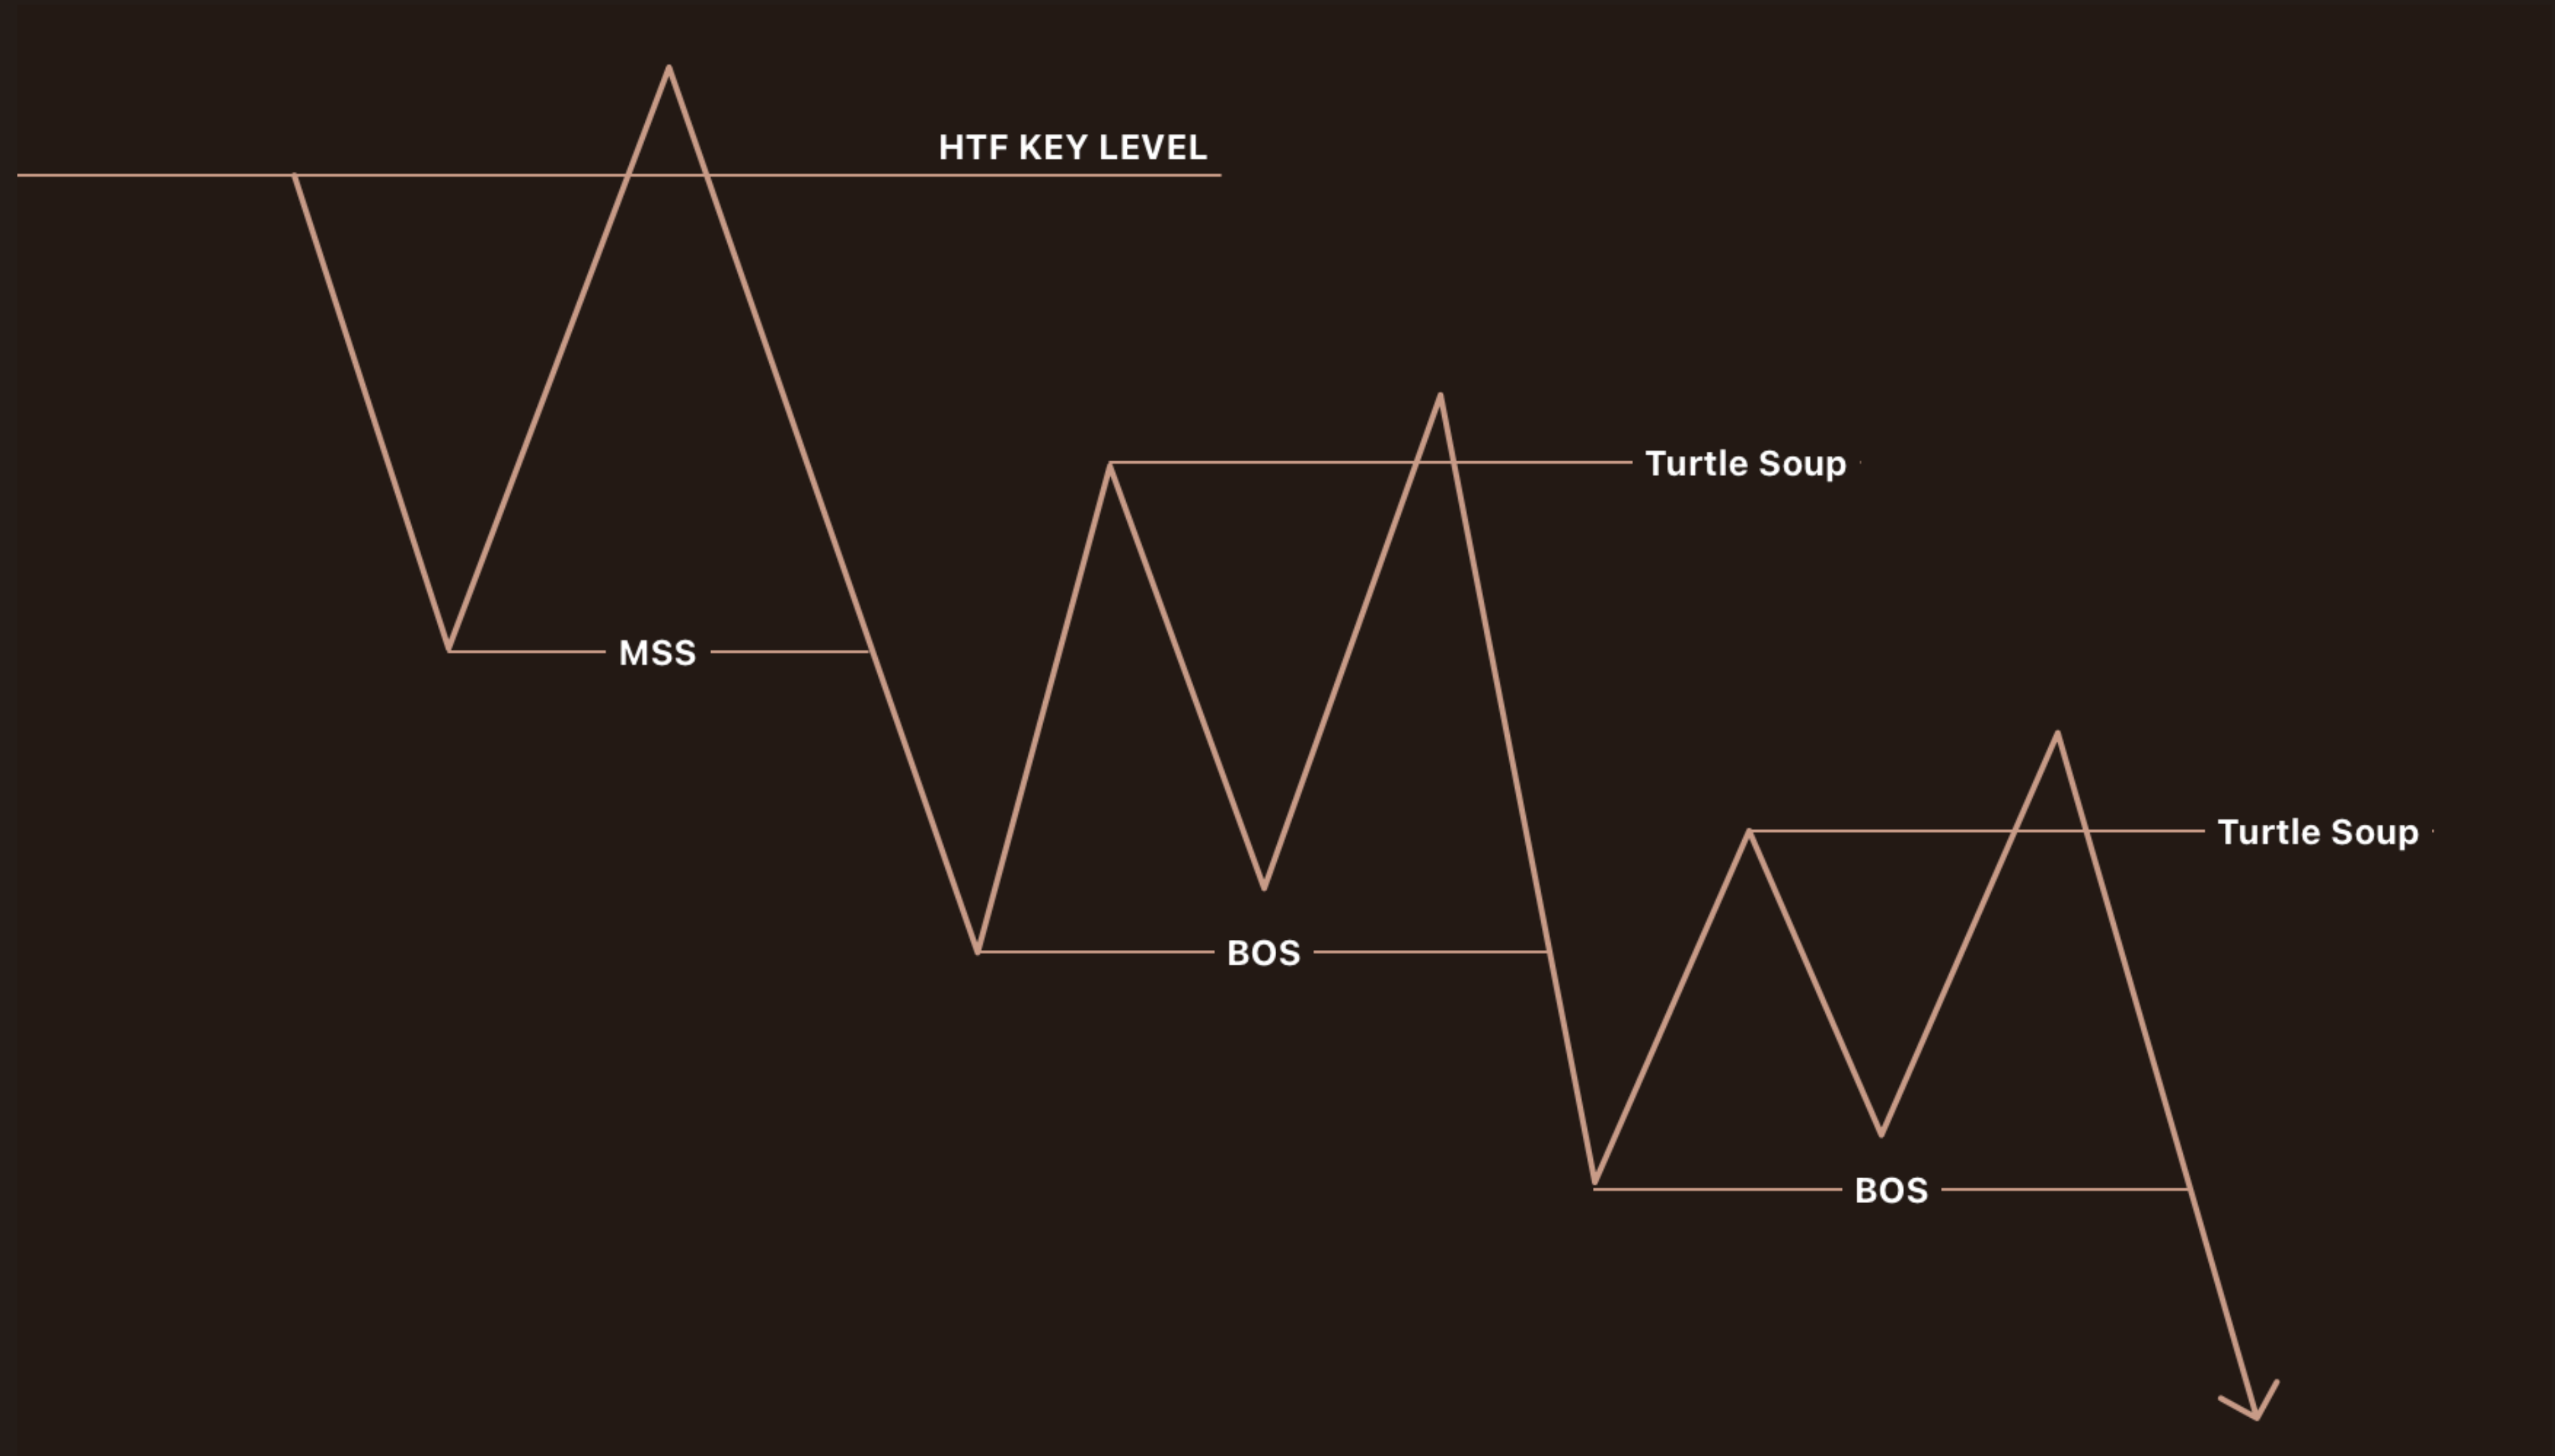

ESSENTIAL MARKET STRUCTURE

- Market structure is the key to identifying market trends in price action and finding entry points.
- When bullish, lows will be swept (**TS**) and highs will be broken (**break of structure**) creating higher lows
- When bearish, highs will be swept (**TS**) and rejected and lows will be broken creating new lower lows
